

DuPont™ Cyrel® Coating Plates

Preliminary Technical Data Sheet

DuPont Packaging Graphics continues to be a global technology leader in the development and supply of commercial coating systems. Their R&D team continues to develop innovative new solutions to help our customers expand their business by taking advantage of new and profitable opportunities in the growing market. DuPont™ Cyrel® Digital photopolymer plates are developed using the revolutionary Cyrel® Fast thermal system. Coating applications are available for all relevant digital imaging and thermal processing systems.

Applications

These photopolymer plates offer high quality print finishing on folding carton and in commercial printing for spot coating.

Cyrel® coating plates can be used for inline and offline coating of:

- Aqueous coating
- UV Coating

Product Features

- Excellent coating transfer permits superior quality
- High resolution and exact register results in fine detail and complex forms can be spot coated in the coating tower
- High durability for long print runs
- Image relief is clean and sharp
- Can be used again and again without any loss of registration
